Math 105 — First Midterm — October 6, 2022

	Write your 8-digit UMID number very clearly in the box to the right, and fill out the information on the lines below.	
Your Initials Or	nly: Your 8-digit UMID number (not un	iqname):
Instructor Nam	e:	Section #:

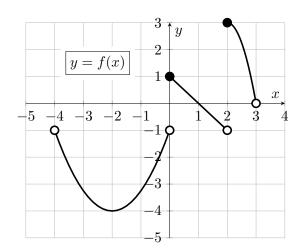

- 1. Do not open this exam until you are told to do so.
- 2. Do not write your name anywhere on this exam.
- 3. This exam has 8 pages including this cover. There are 7 problems.

 Note that the problems are not of equal difficulty, so you may want to skip over and return to a problem on which you are stuck.
- 4. Do not separate the pages of this exam. If they do become separated, write your UMID (not name) on every page and point this out to your instructor when you hand in the exam.
- 5. The back of every page of the exam is blank, and, if needed, you may use this space for scratchwork. Clearly identify any of this work that you would like to have graded.
- 6. Read the instructions for each individual problem carefully. One of the skills being tested on this exam is your ability to interpret mathematical questions, so instructors will not answer questions about exam problems during the exam.
- 7. Show an appropriate amount of work for each problem, so that graders can see not only your answer but how you obtained it.
- 8. You must use the methods learned in this course to solve all problems.
- 9. You are allowed notes written on two sides of a $3'' \times 5''$ note card and one calculator that does not have an internet or data connection (scientific or graphing recommended).
- 10. If you use a graph or table to find an answer, be sure to sketch the graph or write out the entries of the table. In either case, include an explanation of how the graph or table gives the answer.
- 11. Include units in your answer where that is appropriate.
- 12. Problems may ask for answers in *exact form*. Recall that $x = \sqrt{2}$ is a solution in exact form to the equation $x^2 = 2$, but x = 1.41421356237 is not.
- 13. **Turn off all cell phones, smartphones, and other electronic devices**, and remove all headphones, earbuds, and smartwatches. Put all of these items away. The use of any networked device while working on this exam is <u>not</u> permitted.

1. [9 points] The entire graph of a function f(x) is shown below to the left. Also shown is a table of some values for the functions p(x) and r(x). Assume that the function p(x) is invertible.

x	-1	0	1	2	5
p(x)	4	2	-1	-3	-5
r(x)	3	1	-4	-2	0

a. [3 points] Find the domain and range of f(x). Give your answers using interval notation or using inequalities. You do not need to explain or justify your answer.

Answer: Domain:

Range:

b. [2 points] Calculate the average rate of change of f(x) on the interval $-2 \le x \le 2$. Partial credit may be awarded for work shown.

Answer:

c. [4 points] Find each of the following, or write N/A if a value does not exist or there is not enough information to find it.

You do not need to show work.

(i)
$$p^{-1}(2)$$

Answer: $p^{-1}(2) =$ ______

(ii) f(p(0))

Answer: f(p(0)) =______

(iii) f(r(1))

Answer: f(r(1)) =______

(iv) If g(x) = f(x-2) + 3, find g(0). **Answer:** g(0) =______

2. [10 points] Jada has a new job, selling candy to the elves. Below is a chart that shows how much money, D, in dollars, Jada has in her cash register hhours after she starts selling candy.

$$\begin{array}{c|cccc} h & 3 & 5 & 6 \\ \hline D & 16 & 25 & ? \\ \end{array}$$

- a. [2 points] What assumption needs to be made about the situation in order for it to be reasonable to model D using a **linear** function of h?
- **b.** [1 point] If D can be modeled as a linear function of h, how much money, in dollars, will Jada have after 6 hours?

Answer:

c. [4 points] Find both the slope and vertical intercept of the linear function. Then, for each quantity, write a sentence interpreting that quantity in the context of the problem.

Answer: Slope: _____

Interpretation:

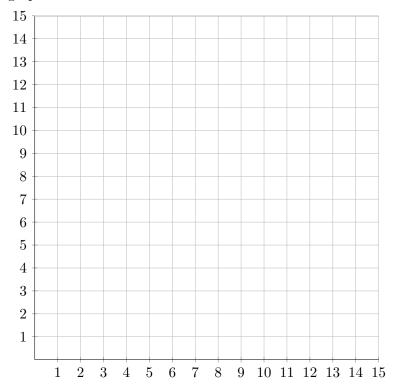

Answer: Vertical intercept: _____

Interpretation:

d. [3 points] Jada is selling both chocolate bars for \$0.20 each and lollipops for \$0.05 each. Suppose that Jada makes exactly \$8 one day selling B chocolate bars and P lollipops. Let f be the function such that B = f(P) in this case. Find a formula for f.

Answer: $f(P) = \underline{\hspace{1cm}}$

- 3. [10 points] Janice recently won \$10,000 through the Michigan lottery. She was so excited to have the extra spending money that she spent her winnings at a constant rate of \$2,000 per month. However, when she had \$4,000 remaining, she decided to curb her spending to make the money last, and she decreased her spending to a constant rate of \$500 per month until she spent all of her winnings. Let W(m) be the remaining amount of money, in thousands of dollars, that Janice has left from her lottery winnings m months after she wins the money.
 - a. [4 points] Draw a graph of your function W(m). Be sure to label your axes (including units) along with any important points, including the beginning and end of different pieces of your graph.

- b. [1 point] After how many months does she spend all of her winnings?
- **c**. [5 points] Find a piecewise-defined formula for W(m) on the appropriate domain in the context of the problem.

- 4. [10 points] Rita adopts a puppy, which she names Spot, and she records certain information about Spot for the first month she has him.
 - Let f(t) be the amount of food, in cups, that Spot eats t days after Rita adopts Spot.
 - Let w(t) be Spot's weight, in pounds, t days after Rita adopts Spot.
 - Assume that w is invertible during this month.
 - **a.** [8 points] For each of the following, either give a practical interpretation of the mathematical expression or equation, or explain why it doesn't make sense in the context of the problem.

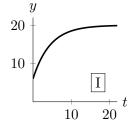

(i)
$$f(8) = 0.75$$

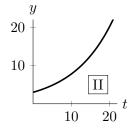

(ii)
$$f(w^{-1}(10))$$

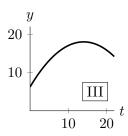

(iii)
$$w(f(9))$$

(iv)
$$\frac{f(14) - f(7)}{14 - 7} = 0.05$$

b. [2 points] Spot gains weight every day. When Rita first gets Spot, he is gaining weight very quickly, but he starts growing more slowly later on. Which of the following graphs could be a graph of y = w(t)? Choose the **one** best answer.

Answer:

5. [9 points] Danica is tossing her wadded-up notes into a wastebasket across the room. The height above the ground of one particular wad, H (in feet), can be expressed as a function of the horizontal distance, d (in feet), from where Danica releases the wad of paper using the following function:

$$H = -\frac{1}{4} \left(d^2 - 4d - 12 \right)$$

a. [2 points] Find the value of the vertical intercept and interpret its meaning in the context of the problem.

Answer: Vertical intercept: _____

Interpretation:

b. [3 points] The rim of the wastebasket is 1.5 feet above the ground and 7 feet horizontally from where Danica released the wad of paper. Using this information, can you tell whether Danica succeeds in throwing the wadinto the wastebasket?

Show all calculations and justify your conclusion with one sentence.

Answer (circle one): She succeeds She fails Cannot be determined

Justification:

c. [4 points] What is the highest point above the ground the wad reaches? Include units. There are at least two methods you could use here: finding the axis of symmetry using the zeros or completing the square.

Answer:

6. [8 points] The parts of this problem are unrelated.

a. [5 points] The following table gives the values of the variables x, A, B, and C:

x	-1	1	2	4
A = a(x)	1	-2	-4	-2
B = b(x)	4	3	2	-1
C = c(x)	1	5	7	11

(i) Given the values in the tables above, which of the following statements **could** be true? Circle all that apply.

A is a function of B

B is a function of A

None of these

(ii) Which of the functions could be (or are) concave down on the **entire** interval $-1 \le x \le 4$? Circle all that could be correct, and justify your answers algebraically.

Answer:

	/	\
α	$ \gamma \rangle$	٠)
~	(ecc	•

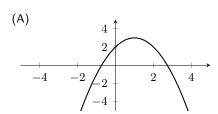

none of these

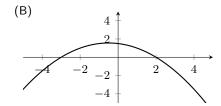

Justification:

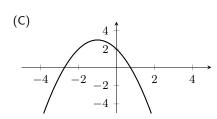

b. [3 points] Two lines are given by the equations y = Kx + 5 and x + y = 4, where K is some constant. For what value(s) of K, if any, will these two lines intersect at x = 1? Show your work or explain your reasoning.

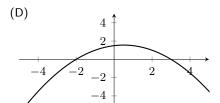

Answer: $K = \underline{\hspace{1cm}}$

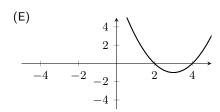

7. [4 points] Below there are two formulas of quadratic functions and 8 graphs. Choose the **one** graph that best fits each formula below. You do not need to justify your answers.

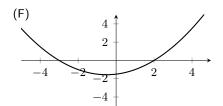

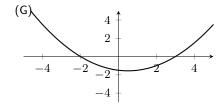

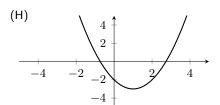

a. [2 points] Which graph best represents $p(x) = \frac{1}{4}(x-2)(x+3)$?

Answer:

b. [2 points] Which graph best represents $q(x) = -(x-1)^2 + 3$?

Answer:
