

10. [8 points] The functions $D(x)$, $E(x)$, and $Q(x)$ are pictured below.

Suppose that

- $D(x) = d(1 + r)^x$ is an exponential function.
- $E(x) = (1 + h)^x$ is an exponential function.
- $Q(x) = ax^2 + c$ is a quadratic function.
- $D(x)$ and $E(x)$ intersect at the point (n, p) .

In the formulas above, a, c, d, h, n, p, r are constants.

In each of the bullet points below, you are asked to circle the option that **must** be true based on the graph above. If there is **not enough information** to decide on any of the options in a given row, circle N/A.

- The constants r and h satisfy:

$r < h$ $r > h$ $r = h$ N/A

- The constants c and d satisfy:

$c < d$ $c > d$ $c = d$ N/A

- The constants a and h satisfy:

$a < h$ $a > h$ $a = h$ N/A

- Suppose that we decrease the value of r . Then the value of n :

Increases Decreases Stays the Same N/A
