**2**. [16 points]

a.	[4 points]	The domain and range of the function $y = f(x)$ are $[-2,6)$ a	and $(-\infty, -10]$ ,
	respectively	ly. What is the domain and range of $g(x) = 1 - f(\frac{1}{4}(x+8))$ ?	

Domain:\_\_\_\_\_

Range:\_\_\_\_

**b.** [2 points] If  $f(x) = |x^3|$ , then the function f(x) is (circle your answer)

EVEN

ODD

**NEITHER** 

**c**. [2 points] Complete the following sentence:

If  $f(x) = 2^x$ , then the graph of g(x) = f(x+3) can be obtained by applying a vertical stretch by a factor of \_\_\_\_\_\_ to the graph of y = f(x).

- **d**. [4 points] Find the equations of the vertical and horizontal asymptotes (if any) of the following functions. If a function does not have vertical or horizontal asymptotes write "None".
  - i)  $y = 3e^{-0.4x} 2$

Vertical asymptote:

Horizontal asymptote:\_\_\_\_

ii)  $y = 1 - 7\log(3x + 1)$ 

Vertical asymptote:

Horizontal asymptote:\_\_\_\_\_

e. [2 points] Find two exact values of  $-\pi < \theta \le \pi$ , measured in radians, such that  $\cos \theta = \cos(A)$ , where  $A = \frac{11}{5}\pi$  radians.

 $\theta =$ \_\_\_\_\_

**f.** [2 points] Let f(x) be a periodic function that has amplitude 4 and let g(x) = 3f(5x). Find the amplitude of the function g(x).

Amplitude of  $g(x) = \underline{\hspace{1cm}}$
