11. [10 points] Consider the figure below in the $xy$-plane containing a circle of radius two and a right triangle with one angle measuring $\frac{\pi}{5}$ radians.

For all parts of this problem, express your answers in exact form.

a. [2 points] Find $\theta$ in radians.

$$\theta = \frac{3\pi}{10}$$

b. [2 points] Find the length of the part of the circle inside the triangle between the point $P$ and the point $(0, 2)$.

The length = $\frac{3\pi}{5}$

c. [2 points] Starting at the point $(2, 0)$ if we rotate 1 radian counterclockwise around the circle, is the resulting point inside the triangle, outside the triangle, or is it impossible to tell? Circle your answer.

inside the triangle  outside the triangle  impossible to tell

d. [4 points] Find the $x$- and $y$-coordinates of the point $P$.

$$P = (2\cos(\frac{\pi}{5}), 2\sin(\frac{\pi}{5}))$$
