Math 115 — Second Midterm — November 13, 2017

Your Initials Only: _____ Your U-M ID # (not uniquame): _____

Instructor Name: _____

_____ Section #: _____

1. Do not open this exam until you are told to do so.

- 2. Do not write your name anywhere on this exam.
- 3. This exam has 10 pages including this cover. There are 10 problems. Note that the problems are not of equal difficulty, so you may want to skip over and return to a problem on which you are stuck.
- 4. Do not separate the pages of this exam. If they do become separated, write your UMID (not name) on every page and point this out to your instructor when you hand in the exam.
- 5. Note that the back of every page of the exam is blank, and, if needed, you may use this space for scratchwork. Clearly identify any of this work that you would like to have graded.
- 6. Please read the instructions for each individual problem carefully. One of the skills being tested on this exam is your ability to interpret mathematical questions, so instructors will not answer questions about exam problems during the exam.
- 7. Show an appropriate amount of work (including appropriate explanation) for each problem, so that graders can see not only your answer but how you obtained it.
- 8. The use of any networked device while working on this exam is <u>not</u> permitted.
- 9. You may use any one calculator that does not have an internet or data connection except a TI-92 (or other calculator with a "qwerty" keypad). However, you must show work for any calculation which we have learned how to do in this course.
 You are also allowed two aides of a single 2" × 5" external.

You are also allowed two sides of a single $3^{\prime\prime}\times5^{\prime\prime}$ not ecard.

- 10. For any graph or table that you use to find an answer, be sure to sketch the graph or write out the entries of the table. In either case, include an explanation of how you used the graph or table to find the answer.
- 11. Include units in your answer where that is appropriate.
- 12. Problems may ask for answers in *exact form*. Recall that $x = \sqrt{2}$ is a solution in exact form to the equation $x^2 = 2$, but x = 1.41421356237 is <u>not</u>.
- 13. Turn off all cell phones, smartphones, and other electronic devices, and remove all headphones, earbuds, and smartwatches. Put all of these items away.
- 14. You must use the methods learned in this course to solve all problems.

1. [14 points] Let g be a twice differentiable function defined on -1 < x < 11. Some values of g(x), g'(x) and g''(x) are shown in the table below.

x	0	2	4	6	8	10
g(x)	-2	-1	3	4	5	6
g'(x)	0.5	2	?	5	1	2
g''(x)	2	1	5	-3	-1	0.5

- **a**. [7 points] Find the *exact* value of the following expressions. If there is not enough information to compute the value, write "NI". Show all your work.
 - i) Let $h(x) = 2^{g(x)}$. Find h'(6).

h'(6) =______i) Let k(x) = g(x)g'(x). Find the value of g'(4) if k'(4) = 15.

iii) Let
$$r(x) = \frac{\sin(x)}{g(x)}$$
. Find $r'(0)$.

r'(0) =_____

g'(4) =_____

- **b**. [7 points] Let j(x) = g(14 4x).
 - i) Use the values from the table to find a formula for L(x), the linear approximation to j(x) at x = 2.

L(x) =_____

ii) Find an approximate value for j(2.25) using your formula for L(x).

 $j(2.25) \approx$ _____

iii) Is your value an overestimate or underestimate of the exact value of j(2.25)? Circle your answer.

OVERESTIMATE UNDERESTIMATE NOT ENOUGH INFORMATION

2. [12 points] Let g(x) be a continuous function whose first and second derivatives are given below.

$$g'(x) = e^{2x} (2x-1)^3 (x-3)^4$$
 and $g''(x) = 4e^{2x} (x^2-4) (2x-1)^2 (x-3)^3$

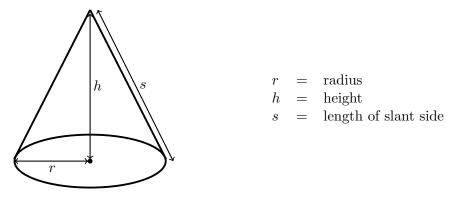

a. [6 points] Find all values of x at which g(x) has a local extremum. Use calculus to find and justify your answers, and be sure to show enough evidence to demonstrate that you have found all local extrema. For each answer blank below, write NONE if appropriate.

Local max(es) at x =_____

Local min(s) at x = _____

b. [6 points] Find all values of x at which g(x) has an inflection point. Use calculus to find and justify your answers, and be sure to show enough evidence to demonstrate that you have found all inflection points. Write NONE if g(x) has no points of inflection.

3. [10 points] Jane is designing a water tank using a cone of height h meters and a circular base of radius r meters as shown below.

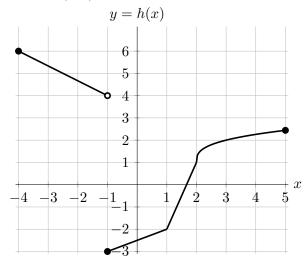

a. [4 points] The cost of the material for the tank is 3 dollars per square meter for the circular base and 5 dollars per square meter for the cone (without the base). The area, A, of the material used for the cone (without the base) is given by the formula $A = \pi rs$ where s is the length of the slant side of the cone, in meters. Find a formula for s in terms of the radius r if Jane plans to spend 200 dollars on the water tank. Your answer should not include the variable h.

b. [2 points] In the context of this problem, what are appropriate constraints on r and/or s? Choose the <u>one</u> best answer.

s =

- $0 < r < \infty \qquad 0 < r < s \qquad 0 < r < \sqrt{\frac{200}{3\pi}} \qquad 0 < s < r \qquad 0 < r < \sqrt{\frac{200}{5\pi}}$
- c. [4 points] Find a formula for V(r), the volume of the tank (in cubic meters) in terms of the radius r. Recall that the volume of a cone with radius R and height H is $\frac{1}{3}\pi R^2 H$. Your answer should not include the variables h and/or s.

4. [15 points] Consider the graph of h(x) below. Note that h is linear on the intervals [-4, -1), [-1, 1], and [1, 2], differentiable on (2, 5), and has a sharp corner at x = 2.

a. [6 points] Find the exact value of the following expressions. If there is not enough information provided to find the value, write "NI". If the value does not exist, write "DNE". Show all your work.

i) Let
$$g(x) = xh(x)$$
. Find $g'(-2)$.

ii) Let $p(x) = h^{-1}(x)$. Find p'(0).

$$g(-2) =$$

a'(n)

p'(0) =_____

- **b**. [2 points] On which of the following intervals does the function h(x) satisfy the hypotheses of the Mean Value Theorem? Circle all that apply.
 - [-4, -1] [-2, 1] [0, 4] [2, 5] None of these
- c. [3 points] On which of the following intervals does the function h(x) satisfy the conclusion of the Mean Value Theorem? Circle all that apply.
 - [-4, -1] [-2, 1] [0, 4] [2, 5] None of these
- **d**. [4 points] For which values given below is the function m(x) = h(h(x)) not differentiable? Circle all that apply.

$$x = -3$$
 $x = -1$ $x = 2$ $x = 3$ $x = 4$ None of these

5. [8 points] Blizzard the snowman and his mouse friend Gabe arrived in Montana, where it has recently snowed. Since Blizzard is still melting, they decide to use this time to pack extra snow onto Blizzard, to help him make it to the North Pole. Let H(t) be Blizzard's height, in inches, if Blizzard and Gabe stay in Montana for t hours. On the interval $1 \le t < \infty$, the function H(t) can be modeled by

$$H(t) = 35 + 10e^{-t/6}(t-2)^{1/3}.$$

Notice that

$$H'(t) = \frac{-5e^{-t/6}(t-4)}{3(t-2)^{2/3}}.$$

a. [6 points] Find all values of t that give global extrema of the function H(t) on the interval $1 \le t < \infty$. Use calculus to find your answers, and be sure to show enough evidence that the point(s) you find are indeed global extrema. For each answer blank, write NONE if appropriate.

Global max(es) at t =_____

Global min(s) at t =_____

b. [2 points] Assuming Blizzard stays in Montana for at least 1 hour, what is the tallest height Blizzard can reach? *Remember to include units.*

page 6

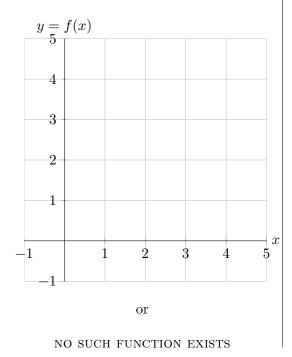

6. [6 points] Let L(x) be the linear approximation and Q(x) be the quadratic approximation to the function d(x) near x = 1. Suppose that d'(x), d''(x) and d'''(x) are defined for all real numbers. Let $Q(x) = 7(x-1)^2 - 8(x-1) + 3$. Find the *exact* value of the following quantities. If there is not enough information to answer the question, write "NI".

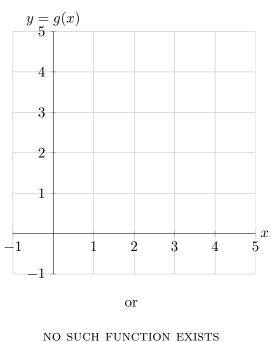

- 7. [5 points] Sketch graphs of functions f(x) and g(x) satisfying the conditions below, or circle NO SUCH FUNCTION EXISTS. You do not need to explain your answer.
 - A function f(x) defined on the interval (0,4) that satisfies: A continuous function g(x) defined on the interval (0,4) that satisfies:
 - i) f'(x) > 0 for all $x \neq 2$.
 - ii) x = 2 is a global minimum.

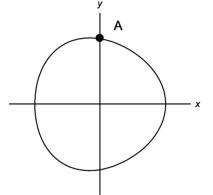

i)
$$\lim_{x \to 2^{-}} g'(x) = \infty.$$

ii) $\lim_{x \to 2^{+}} g'(x) = 0.$

8. [11 points] Let C be the curve given by the equation $81 - (x^2 + y^2)^2 = 2xy^2$. The graph of C is shown below.

a. [2 points] Find the coordinates (x, y) of the point A.

A = _____

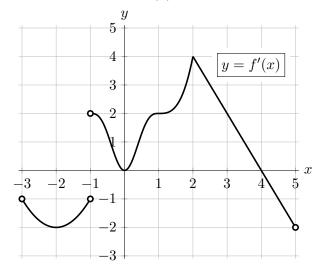

b. [6 points] Find $\frac{dy}{dx}$. Show all your computations step by step.

c. [3 points] Find an equation of the tangent line L(x) to the graph of \mathcal{C} at A. Show all your work.

$$h(x) = \begin{cases} 2Bx + A\ln(x) & 0 < x \le 1\\ \\ \frac{4A}{x} + Bx - 1 & 1 < x \le 2. \end{cases}$$

Find all the values of A and B that make the function h(x) differentiable on the interval 0 < x < 2. If no such values exist, write NONE. Justify your answer.

For each of the following parts, circle <u>all</u> of the available correct answers.

a. [2 points] At which of the following values of x does f(x) appear to have a critical point?

x = -2 x = -1 x = 0 x = 1 x = 2 x = 4 None of these

b. [2 points] At which of the following values of x does f(x) attain a global maximum on the interval [0,3]?

$$x = 0$$
 $x = 1$ $x = 2$ $x = 3$ None of these

c. [2 points] At which of the following values of x does f(x) attain a local minimum?

x = -2 x = -1 x = 0 x = 1 x = 4 None of these

- **d**. [2 points] Which of the following values of x are <u>not</u> in the domain of f''(x)?
 - x = -1 x = 0 x = 1 x = 2 None of these

e. [2 points] At which of the following values of x does f(x) appear to have an inflection point?

x = -2 x = -1 x = 0 x = 1 x = 4 None of these

f. [2 points] On which of the following intervals is f''(x) increasing over the <u>entire</u> interval?

(-3,-1) (-1,0) (-1,1) (0,2) none of these
