1. (2 points each) **True or False.** Circle True only if the statement is always true.

(a) The inverse function of \( g(t) = (1.04)^t \) is \( g^{-1}(t) = \frac{\ln t}{\ln 1.04} \).  

(b) \( \ln(2^x + 2^{-x}) = 0 \)  

(c) If \( 22 = 18e^{2k} \), then \( k = 1.003 \).  

(d) \( \log(67.34(1.03)^t) = t(\log(67.34) + \log(1.03)) \)  

(e) The graph of the function \( s(t) = 2\sin(2t + 3) \) is the graph of the function \( y = 2\sin(2t) \) shifted 3 units to the left.  

(f) If \( f' \) is increasing, then \( f \) is increasing.  

2. (6 points) A function \( f(x) \) has values given in the following table. Estimate the value of its derivative at \( x = 1 \).
