9. (12 points) On the axes below, sketch a function $f$ satisfying all the following properties. Be careful to label all important points on the axes.

- $f$ has a vertical asymptote at $x = 4$
- $f$ is continuous on $(-\infty, 4)$ and on $(4, \infty)$
- $f'(x) > 0$ and $f''(x) > 0$ for all $x$ in $(-\infty, 0)$
- $f(0) = 2$
- $f$ is not differentiable at $x = 0$
- $f''(x) > 0$ for all $x$ in $(0, 2)$
- $f'(2) > 0$
- $f''(x) < 0$ for all $x$ in $(2, 4)$
- For all $x > 4$, $f$ is decreasing and is concave up
- $\lim_{x \to \infty} f(x) = 1$

One possible solution is shown below.
