1. [12 points]

For the following statements, select True if the statement is $A L W A Y S$ true, and select False otherwise. No explanations are required.
a. [2 points] Suppose that $f$ is a function whose second derivative is both continuous and positive everywhere. Then

$$
f(2+\Delta x)>f(2)+f^{\prime}(2) \Delta x .
$$

b. [2 points] Suppose that $g$ is a continuous function and $g^{\prime}$ is defined for all $x$. Then $g^{\prime \prime}$ is also defined for all $x$.

True False
c. [2 points] If a continuous function $H$ has exactly one local maximum and two local minima, then there are exactly three distinct values of $x$ such that $H^{\prime}(x)=0$.

True False
d. [2 points] Suppose that $A$ and $B$ are two continuous functions such that $A^{\prime}(x) \leq B^{\prime}(x)$ for all $x$. Then $A(x) \leq B(x)$ for all $x$.

True
False
e. [2 points] Suppose $P(x)$ is a continuous function satisfying $P^{\prime}(x) \geq 0$ whenever $x>0$. Then $P(a) \leq P(b)$ whenever $0<a<b$.

True
False
f. [2 points] If the functions $R$ and $S$ are inverses of each other, then $R^{\prime}$ and $S^{\prime}$ are inverses of each other.

True False
