

5. [4 points] Shown below are portions of the graphs of  $y = f(x)$ ,  $y = f'(x)$ , and  $y = f''(x)$ . Note that the dotted graph has a vertical asymptote at  $x = 0$ . Determine which graph is which, and then, on the answer lines below, indicate after each function the letter A, B, or C that corresponds to its graph. No work or justification is needed.

**Answer:**  $f(x) : \underline{\hspace{2cm}}$   
 $f'(x) : \underline{\hspace{2cm}}$   
 $f''(x) : \underline{\hspace{2cm}}$

6. [7 points] The function  $q(x)$  is given by the following formula, where  $c$  and  $m$  are constants:

$$q(x) = \begin{cases} c - 4x - x^2 & -3 \leq x \leq 0 \\ mx & 0 < x \leq 2. \end{cases}$$

- a. [4 points] Assuming  $c = -3$  and  $m = 2$ , find the  $x$ -values of all global minima and global maxima of  $q(x)$  on the interval  $[-3, 2]$ . If there are none of a particular type, write NONE. Use calculus to find and justify your answers, and show your work.

**Answer:** Global min(s) at  $x = \underline{\hspace{2cm}}$  and Global max(es) at  $x = \underline{\hspace{2cm}}$

- b. [3 points] Find one pair of values for  $c$  and  $m$  such that  $q(x)$  is differentiable at  $x = 0$ . Show your work.

**Answer:**  $c = \underline{\hspace{2cm}}$  and  $m = \underline{\hspace{2cm}}$
