- 10. [11 points] Suppose an online retailer uses robots to transport merchandise to the shipping area in its warehouse. Researchers are analyzing data from sales on November 28, 2014.
 - Let r(h) be the total number of kilometers the warehouse robots had traveled in the first h hours of November 28, 2014.
 - Let Q(h) be the total weight, in pounds, of the merchandise that had been transported to shipping by the warehouse robots in the first h hours of November 28, 2014.

Suppose that both r(h) and Q(h) are invertible and differentiable on the interval 0 < h < 24. For each of the questions below, circle the <u>one</u> best answer. No points will be given for ambiguous or multiple answers.

- a. [2 points] Which one of the following expressions is equal to the total number of pounds of merchandise the robots had transported to shipping on November 28 when the robots had traveled a total of 3 km that day?
 - i. Q(r(3)) ii. r(Q(3)) iii. $r^{-1}(Q(3))$ iv. $r(Q^{-1}(3))$ v. $Q(r^{-1}(3))$
- **b.** [2 points] Let m be a positive constant. Which one of the following expressions is equal to the total number of kilometers the robots had traveled two hours after they had transported a total of m pounds of merchandise to shipping?

i.
$$r(m+2)$$
 ii. $r(Q^{-1}(m)+2)$ iii. $Q(2)+r(m)$ iv. $Q^{-1}(m+2)$ v. $Q'(m)+2$

c. [2 points] Which one of the following expressions is equal to the total number of pounds of merchandise transported by the warehouse robots between 1 am and 5 am?

i.
$$Q(5)$$
 ii. $Q'(5) - Q'(1)$ iii. $\int_1^5 Q(h) \, dh$ iv. $\int (Q(5) - Q(1)) \, dh$ v. $\int_1^5 Q'(h) \, dh$

d. [2 points] Which one of the following expressions is equal to the average rate (in pounds per hour) at which merchandise was transported by the robots between 8 am and 10 am?

i.
$$\frac{Q'(10) + Q'(8)}{2}$$
 ii. $\frac{Q'(10) - Q'(8)}{2}$ iii. $\frac{Q(10) - Q(8)}{2}$ iv. $\int_{8}^{10} Q(h) \, dh$ v. $\int_{8}^{10} Q'(h) \, dh$

e. [3 points] Circle the one equation below that best supports the following statement:

On November 28, the warehouse robots had traveled a total of 29 kilometers about half an hour after they had traveled a total of 25 kilometers.

i.
$$r'(\frac{1}{2}) = -4$$
 ii. $r'(r^{-1}(25)) = 4$ iii. $r'(29) = 8$ iv. $(r^{-1})'(25) = \frac{1}{8}$ v. $(r^{-1})'(25) = 4$
