4. [10 points] A portion of the graph of $y=f(x)$ is shown below.

The area of shaded region $A$ is $\mathbf{3}$, and the area of shaded region $B$ is 3 .

Let $F(x)$ be the continuous antiderivative of $f(x)$ with $F(0)=1$ whose domain includes the interval $-6 \leq x \leq 4$.
a. [3 points] For what value(s) of $x$ with $-6<x<4$ does $F(x)$ have local extrema? If there are none of a particular type, write none. You do not need to justify your answers.

Answer: local max(es) at $x=$ $\qquad$

Answer: local min(s) at $x=$ $\qquad$
b. [7 points] Recall that $F(x)$ is the continuous antiderivative of $f(x)$ with $F(0)=1$. On the axes below, draw the graph of $y=F(x)$ on the interval $-6 \leq x \leq 4$.
Be sure that you pay close attention to each of the following:

- the value of $F(x)$ at each of $x=-6,-4,-2,0,2,4$
- where $F$ is/is not differentiable
- where $F$ is increasing/decreasing/constant
- the concavity of the graph of $y=F(x)$
