Write your 8-digit UMID number very clearly in the box to the right.

Your Initials Only: _______ Instructor Name: _________________________ Section #: ______

1. Please neatly write your 8-digit UMID number, your initials, your instructor’s first and/or last name, and your section number in the spaces provided. **You will receive 4 points on this exam for doing this correctly.**

2. This exam has 10 pages including this cover.

3. There are 9 problems. Note that the problems are not of equal difficulty, so you may want to skip over and return to a problem on which you are stuck.

4. Please read the instructions for each individual problem carefully. One of the skills being tested on this exam is your ability to interpret mathematical questions, so instructors will not answer questions about exam problems during the exam.

5. Show an appropriate amount of work (including appropriate explanation) for each problem, so that graders can see not only your answer but how you obtained it.

6. If you need more space to answer a question, please use the back of an exam page. Clearly indicate on your exam if you are using the back of a page, and also clearly label the problem number and part you are doing on the back of the page.

7. You are allowed notes written on two sides of a 3'' × 5'' note card.

8. For any graph or table that you use to find an answer, be sure to sketch the graph or write out the entries of the table. In either case, include an explanation of how you used the graph or table to find the answer.

9. Include units in your answer where that is appropriate.

10. Problems may ask for answers in **exact form**. Recall that $x = \sqrt{2}$ is a solution in exact form to the equation $x^2 = 2$, but $x = 1.41421356237$ is not.

11. You must use the methods learned in this course to solve all problems.

1. [4 points] If you have not already done so, neatly write your 8-digit UMID number, your initials, your instructor’s first and/or last name, and your section number in the spaces provided.

2. [9 points] The chain grocery store Mathmart stocks their shelves full of brain-targeted foods for their customers on a regular basis. The time (in minutes) it takes to stock the shelves after the delivery truck arrives is represented by the cumulative distribution function (cdf):

\[
R(t) = \begin{cases} 
0 & t < 1 \\
1 - \frac{1}{t^2} & t \geq 1 
\end{cases}
\]

a. [3 points] Find a formula for \( r(t) \), a probability density function (pdf) corresponding to \( R(t) \).

b. [3 points] What is the median amount of time (in minutes) it takes to stock the shelves?

c. [3 points] Write an integral representing the mean amount of time (in minutes) it takes to stock the shelves. Your expression should not contain \( r \) or \( R \). Do not solve this integral.
3. [14 points] Molly has recently become a sheep herder. She rotates her sheep through various fields so that the sheep have a varied diet and the fields have a chance to grow. Every Monday, the sheep visit the same field. Before the sheep graze for the first time in this field, its grass is 20 centimeters tall. Molly’s sheep are picky and only eat the top 40% of the length of grass in this field every Monday. Over the course of the week, before the next Monday, the grass grows 3 centimeters. Let $G_i$ represent the height in centimeters of the grass right before the sheep graze on it for the $i$th time. Note that $G_1 = 20$.

   a. [5 points] Find expressions for each of $G_2$, $G_3$, and $G_4$. You do not need to evaluate your expressions.

   b. [5 points] Find a general closed-form expression for $G_n$, defined for $n = 2, 3, 4 \ldots$

   c. [4 points] In order for the field to meet sheep grazing standards, the height of the grass must be at least 5 cm when the sheep begin grazing. Molly thinks she will be able to stay on her field forever. Help her determine whether she can stay by either showing that the grass will eventually be less than 5 cm in height, or showing that the grass will be at least 5 cm each time before the sheep graze.
4. [12 points]
   a. [6 points] Determine if the following integral converges or diverges and circle the corresponding word. You must show all work and indicate any theorems you use. You do not need to calculate the value of the integral if it converges:

\[ \int_{4}^{\infty} \frac{x}{3x^2 - \ln x} \, dx \]

_Circle one:_ Converges Diverges

b. [6 points] Determine whether the following series converges or diverges and circle the appropriate answer. **Fully justify** your answer including using proper notation and showing mechanics of any tests you use:

\[ \sum_{n=1}^{\infty} \frac{100^n}{n(99^n)} \]

_Circle one:_ Converges Diverges
5. [10 points] George’s mom’s birthday party is in 24 hours and George still hasn’t bought her a present. The mall near George is open for the next 6 hours, then closes for 12 hours, and then is open another 6 hours tomorrow before the party starts. George will search the mall until he finds the perfect present.

Below is a partial graph of \( P(h) \), the probability density function (pdf) representing how long it will take George to find the perfect present in \( h \) hours. Assume \( a > 0 \) is some constant and \( P(h) = 0 \) for any \( h \leq 0 \).

\[
\begin{array}{c|c|c|c|c|c}
0 & 6 & 12 & 18 & 24 & 2a \\
\hline
& a & & & & P(h)
\end{array}
\]

a. [3 points] If the probability George finds the perfect present for his mom before the party starts is 1, what is the correct value of \( a \) in the graph above?

It is important to note for parts b. and c. that only a partial graph of the function \( P(h) \) is shown.

b. [3 points] Now suppose \( a = \frac{1}{20} \). What is the probability George will not find a present before the start of the party?

c. [4 points] In the case that \( a = \frac{1}{20} \), finish the sentence to write a practical interpretation for the statement \( P(26) = .02 \):

There is approximately a 1% chance that....
6. [14 points] Determine whether each of the following series converge conditionally, converges absolutely, or diverges and circle the appropriate answer. **Fully justify** your answer including using **proper notation** and showing mechanics of any tests you use.

   a. [7 points]

   \[ \sum_{n=1}^{\infty} \frac{(-1)^n}{6 + \sqrt{n}} \]

   Circle one: Absolutely Converges Conditionally Converges Diverges
6. (continued) Here is a reproduction of the instructions for the problem:

Determine whether each of the following series converge conditionally, converges absolutely, or diverges and circle the appropriate answer. **Fully justify** your answer including using **proper notation** and showing mechanics of any tests you use.

b. [7 points]

\[ \sum_{n=1}^{\infty} \frac{n^2 + 50n \sin 2n}{n^{7/2}} \]

*Circle one:* Absolutely Converges  Conditionally Converges  Diverges
7. [8 points] Suppose $F$ is a nonnegative function defined for all real numbers $x$. Below are properties of $F$. Circle all that apply to $F$ based on the fact it has this property.

a. [2 points] $\int_{-\infty}^{\infty} F(x) \, dx = 1$.
   (A) $F$ could be a PDF.
   (B) $F$ could be a CDF.
   (C) $F$ is definitely not a PDF or a CDF.

b. [2 points] $\lim_{x \to \infty} F(x) = 1$ and $F(2) < F(1)$.
   (A) $F$ could be a PDF.
   (B) $F$ could be a CDF.
   (C) $F$ is definitely not a PDF or a CDF.

c. [2 points] $F'(x) > 0$ for $x \geq 0$.
   (A) $F$ could be a PDF.
   (B) $F$ could be a CDF.
   (C) $F$ is definitely not a PDF or a CDF.

d. [2 points] $F(7) = 2$.
   (A) $F$ could be a PDF.
   (B) $F$ could be a CDF.
   (C) $F$ is definitely not a PDF or a CDF.

8. [9 points] The parts of this problem are unrelated.

a. [4 points] Let $\sum_{n=1}^{\infty} a_n$ be a geometric series with $a_3 = 54$ and $a_6 = -2$. Write a general formula for $a_n$.

b. [5 points] Let $b_n = \frac{n}{n+1}$ and $s_n = \sum_{i=1}^{n} b_i$. Circle all statements which are true.
   (A) The sequence $b_n$ is bounded.  (D) The sequence $s_n$ is bounded.
   (B) The sequence $b_n$ is monotone.  (E) The sequence $s_n$ is monotone.
   (C) $\lim_{n \to \infty} b_n$ exists.  (F) $\lim_{n \to \infty} s_n$ exists.
9. [20 points] Otto would like to landscape his yard, so he contacts the company Granville’s Calculate-Yourself Gardening. Granville’s company provides each potential customer with a list of possible equations and improper integrals guiding the landscaping of the yard. Granville’s company also offers a discount to customers that can correctly solve the integrals. Otto, strapped for cash, desperately wants to solve the equations Granville has sent him.

a. [3 points] Granville has also informed Otto that he can plant a maple tree in the back of the yard that is initially 2 meters tall. Granville estimates that the maple tree will grow at an instantaneous rate of

$$M(t) = \frac{12t}{e^t}$$

meters per year $t$ years after it is planted. Write an integral that gives the height of the tree $t$ years after it is planted. Your answer should not involve the letter $M$.

b. [7 points] Determine the maximum height that the maple tree will grow to.
9. (continued)  

c. [10 points] Granville tells Otto that he can get a truck to come and dispense dirt into the yard for 2 hours. The instantaneous rate that the truck will dispense dirt $t$ hours after the truck arrives is

$$D(t) = \frac{(\sin(t))^2}{t^{5/2}\sqrt{2-t}}$$

pounds per minute. Show that $\int_0^2 D(t)\,dt$ converges. Justify all of your work.

*Hint 1: Try splitting this into 2 integrals, one from 0 to 1, and the other from 1 to 2.*  
*Hint 2: You may want to use the fact that $\sin t \leq t$ for $t \geq 0$.
