- **9.** [9 points] Consider the function $f(x) = \begin{cases} \frac{\sin(x^2)}{x} & x \neq 0 \\ c & x = 0 \end{cases}$
 - a. [2 points] Find the value of c that makes the function f(x) continuous at x = 0. Show your work carefully.

$$\lim_{X\to 0} \frac{\sin(x^2)}{X} = \lim_{X\to 0} \frac{2x\cos(x^2)}{1} = 2.0.1 = 0$$

$$\lim_{X\to 0} \frac{\sin(x^2)}{X} = 2.0.1 = 0$$

Answer:
$$c =$$

b. [2 points] Let b_n be the *n*th positive value of x such that f(x) = 0. Write a formula for b_n .

$$f(x) = 0 \Rightarrow \frac{\sin(x^2)}{x} = 0 \Rightarrow \sin(x^2) = 0 \Rightarrow x^2 = n\pi$$

for some integer n.

Answer:
$$b_n = \frac{\sqrt{n \pi}}{}$$

For parts **c** and **d** below, let $a_n = \int_{b_{n-1}}^{b_n} f(x) dx$ for $n \ge 1$.

c. [2 points] Explain why a_n is an alternating sequence.

Because
$$S_{1n}$$
 alternates from $+$ to $-$ between its zeroes:
$$a_{n} = \int_{\sqrt{(n-1)\pi}}^{\sqrt{n\pi}} \frac{S_{1n}(x^{2})}{x} dx \quad \text{let } w = x^{2}, \Rightarrow dw = 2x dx$$

$$= \int_{\sqrt{(n-1)\pi}}^{\sqrt{n\pi}} \frac{S_{1n}(\omega)}{x} d\omega$$

d. [3 points] Compute $\lim_{n\to\infty} a_n$. Provide clear justification and show your work.

$$|a_{n}| = \left| \int_{(n-1)\pi}^{h\pi} \frac{\sin(\omega)}{2\omega} d\omega \right| \leq \int_{(n-1)\pi}^{n\pi} \frac{\sin(\omega)}{2\omega} d\omega \leq \int_{(n-1)\pi}^{h\pi} \frac{d\omega}{2\omega}$$

$$= \frac{1}{2} \ln \omega \left| \int_{(n-1)\pi}^{h\pi} \frac{\sin(\omega)}{2\omega} d\omega \right| \leq \int_{(n-1)\pi}^{h\pi} \frac{d\omega}{2\omega}$$

$$= \frac{1}{2} \ln \omega \left| \int_{(n-1)\pi}^{h\pi} \frac{\sin(\omega)}{2\omega} d\omega \right| \leq \int_{(n-1)\pi}^{h\pi} \frac{d\omega}{2\omega}$$

$$= \frac{1}{2} \ln \omega \left| \int_{(n-1)\pi}^{h\pi} \frac{\sin(\omega)}{2\omega} d\omega \right| \leq \int_{(n-1)\pi}^{h\pi} \frac{d\omega}{2\omega}$$

$$= \frac{1}{2} \ln \omega \left| \int_{(n-1)\pi}^{h\pi} \frac{\sin(\omega)}{2\omega} d\omega \right| \leq \int_{(n-1)\pi}^{h\pi} \frac{d\omega}{2\omega}$$

as
$$n \to \infty$$
, $\frac{n}{n-1} \to 1$, so $|a_n| \to 0$, so $a_n \to 0$

Answer: $\lim_{n \to \infty} a_n =$
