

2. [4 points] Compute the following limit. Fully justify your answer and use **proper limit notation**.

$$\lim_{x \rightarrow 0} \frac{\sin^2(7x)}{\cos(7x) - 1}$$

Solution: We use L'Hospital's Rule:

$$\begin{aligned} \lim_{x \rightarrow 0} \frac{\sin^2(7x)}{\cos(7x) - 1} &\stackrel{\text{LH}}{=} \lim_{x \rightarrow 0} \frac{14 \sin(7x) \cos(7x)}{-7 \sin(7x)} \\ &= \lim_{x \rightarrow 0} -2 \cos(7x) \\ &= -2. \end{aligned}$$

Answer: $\lim_{x \rightarrow 0} \frac{\sin^2(7x)}{\cos(7x) - 1} = \underline{\hspace{10em} -2 \hspace{10em}}$

3. [7 points] **Compute** the value of the following improper integral if it converges. If it does not converge, use a **direct computation** of the integral to show its divergence. Be sure to show your full computation, and be sure to use **proper notation**.

$$\int_2^\infty \frac{e^{-3/x}}{x^2} dx$$

Solution: By definition,

$$\int_2^\infty \frac{e^{-3/x}}{x^2} dx = \lim_{b \rightarrow \infty} \int_2^b \frac{e^{-3/x}}{x^2} dx.$$

Set $u = \frac{3}{x}$. Then $du = -\frac{3}{x^2} dx$.
Therefore,

$$\begin{aligned} \int_2^\infty \frac{e^{-3/x}}{x^2} dx &= \lim_{b \rightarrow \infty} \int_2^b \frac{e^{-3/x}}{x^2} dx \\ &= \lim_{b \rightarrow \infty} \int_{3/2}^{3/b} -\frac{1}{3} e^{-u} du \\ &= \lim_{b \rightarrow \infty} \left. \frac{1}{3} e^{-u} \right|_{3/2}^{3/b} \\ &= \lim_{b \rightarrow \infty} \frac{1}{3} e^{-3/b} - \frac{1}{3} e^{-3/2} \\ &= \frac{1}{3} - \frac{1}{3} e^{-3/2} \end{aligned}$$

Circle one: **Diverges**

Converges to $\underline{\hspace{10em} \frac{1}{3} (1 - e^{-3/2}) \hspace{10em}}$
