- 6. [6 points] Consider the curve  $y = \sqrt{1 x^2}$ . Suppose a paperweight is formed by rotating this curve around the x-axis. This paperweight has a density given by  $\rho(x) = 2 + \cos(x) \text{ g/cm}^3$ . The units on both axes are centimeters (cm).
  - a. [3 points] Write an expression that gives the approximate mass, in grams, of a slice of the paperweight taken perpendicular to the x-axis at coordinate x with thickness  $\Delta x$ . (Assume that  $\Delta x$  is small but positive.) Your expression should <u>not</u> involve any integrals.

**Answer:** Mass of slice  $\approx$  \_\_\_\_\_

**b**. [3 points] Write, but do <u>not</u> evaluate, an expression involving one or more integrals that gives the mass, in grams, of the paperweight.

Answer: Mass = \_\_\_\_\_

7. [6 points] Determine whether the following series converges absolutely, converges conditionally, or diverges, and give a complete argument justifying your answer. In particular, be sure to show all work and include any convergence tests used.

$$\sum_{n=1}^{\infty} \frac{(-1)^n \ln(n)}{n}$$

Circle one: Converges Absolutely

Converges Conditionally

Justification:

DIVERGES
