- **5**. [16 points] Identify each of the following as true or false. Give a one-sentence explanation for your response in each case.
  - **a.** [4 points] Euler's method applied to the system  $\mathbf{x}' = \begin{pmatrix} t & 0 \\ 1 & t^2 \end{pmatrix} \mathbf{x}$ ,  $\mathbf{x}(0) = \begin{pmatrix} 0 \\ 1 \end{pmatrix}$  gives, after 2 steps with h = 0.5,  $\mathbf{x}(1) \approx \begin{pmatrix} 0 \\ 1.25 \end{pmatrix}$ .

True False

**b.** [4 points] Given that  $\mathbf{x}_1 = \begin{pmatrix} e^t \\ 3e^t \end{pmatrix}$  and  $\mathbf{x}_2 = \begin{pmatrix} 2e^t \\ 6e^t \end{pmatrix}$  are solutions to  $\mathbf{x}' = \mathbf{A}\mathbf{x}$  for some  $2 \times 2$  matrix  $\mathbf{A}$ , a general solution is  $\mathbf{x} = c_1\mathbf{x}_1 + c_2\mathbf{x}_2$ .

True False

c. [4 points] If  $\mathbf{x}_1(t)$ ,  $\mathbf{x}_2(t)$ , ...,  $\mathbf{x}_n(t)$  are solutions to a system of n linear first-order differential equations, and if  $\mathbf{x}_1(0) = \begin{pmatrix} 1 \\ 0 \\ 0 \\ \vdots \\ 0 \end{pmatrix}$ ,  $\mathbf{x}_2(0) = \begin{pmatrix} 0 \\ 1 \\ 0 \\ \vdots \\ 0 \end{pmatrix}$ , ...,  $\mathbf{x}_n(0) = \begin{pmatrix} 0 \\ 0 \\ 0 \\ \vdots \\ 1 \end{pmatrix}$ , then a general solution to the system is given by  $\mathbf{x} = c_1\mathbf{x}_1 + c_2\mathbf{x}_2 + \dots + c_n\mathbf{x}_n$ .

True False

**d.** [4 points] If one or more of the eigenvalues of the constant matrix **A** are zero, the linear system  $\mathbf{x}' = \mathbf{A}\mathbf{x}$  has no solution.

True False
